RE: Site Inspection, North Lily Mining Company, Tintic Heap Leach, M/023/007, Juab County, Utah

Date of Inspection: January 30, 2002  
Time of Inspection: 3:30 p.m.  
Conditions: Cold, windy, partly cloudy  
Participants: Doug Jensen, DOGM

**Purpose of Inspection:** To check recent reclamation efforts.

**Observations:**

The snow had melted from the west-facing slope where the last reclamation effort had taken place. The plant site, pond and topsoil storage areas were still snow covered so evaluation of these areas was not possible at this time.

I walked over the portion of the site that the snow had melted off. Overall the site looked good, but I did notice some minor rilling on the north side of the leach pad. There was snow around the entire area but the heap was relatively snow free. I hope that the area gets some more moisture before spring to give the reclamation a good start.

**Conclusions and Recommendations:**

Continue to monitor the site.
